

Simplifying Procurement with Prendio & NetSuite

The Challenge

Notch Therapeutics, an innovative Series A funded life science research organization, sought a procurement solution that would integrate with leading ERP system NetSuite to automate everyday ordering and accounts payable operations. The company's critical research fueled new therapies for conditions such as cancers and autoimmune diseases. Optimizing procurement through its existing NetSuite investment without drastic process changes or high costs was a requirement—the team needed a simple solution that would limit disruption and scale with long-term business growth.

The Solution

Implementing Prendio eProcurement software met Notch Therapeutics' automation needs while saving its team both time and money. The easy-to-use software was the answer to its procurement problems, functioning seamlessly with existing accounting codes, payment terms, and preferred vendors without major changes to A/P processes in NetSuite. Ordering, tracking, and receiving through a NetSuite connector custom-built for the company also avoided the complications and slow adoption times of traditional third-party integrators. Together, Prendio and NetSuite served as the organization's cost-effective total solution to maintaining a simple and effective procure-to-pay system.

The Results

By adopting the Prendio platform and partnering with a trusted software provider instead of a temporary third party, team members at Notch were able to create a foundation for ongoing procurement process improvement. Coding, syncing account segments and vendors, and accurately bridging data between Prendio and NetSuite became easy and painless. The Notch team took advantage of custom punchouts, built-in software discounts, and intuitive controls to automate operations and manage bill handling without disruption. And because Prendio developed a tailored integration bundle, it was able to ensure successful platform usage and respond quickly to additional enhancement requests. The company now continues to leverage the most robust ERP on the market with the best eProcurement software for life sciences.

The Perfect Combination

Build the most effective procure-to-pay system possible. The combination of NetSuite, the number one life science ERP, and Prendio, the best biotech eProcurement software, create an elegant, simple solution for advanced procurement operations. Integrate Prendio seamlessly with NetSuite through the official Prendio SuiteApp or a customized integration bundle.

- Simple Requester Dashboard
- Multiple Ways to Shop
- Robust Punchout Portfolio
- Easy User Administration
- Paperless Three-Way Match
- Robust Reporting Tools

“Prendio offers us the best solution for procurement with an easy user experience, detailed reporting, and backed by professional, responsive staff.”

- Ryan Martin
